

XM radio broadcast of weather reports is important to our safety. We travel through out the country and depend on XM weather reports to avoid storms and other bad weather. Local station weather reporting is very difficult to find while traveling. We also listen to local traffic reports when we are in or near a major city using the up-to-date information to safely avoid traffic problems. Please don't restrict the programming content offered by satellite radio. Let the listeners, not the NAB, decide what is of value.
